 **Ingrassia Pier Luigi (DOCENTE)** 0:31

Good morning.

Good morning. Good morning to that. Good morning everyone.

Just we'll wait a couple of minutes more to let the people to join, if you don't mind.

OK, I think we gave the regular 5 minutes for everybody to to join.

If you don't mind, so welcome for the new camera. If you don't mind, I will share my screen.

And I will start.

I think you might see the full screen right now. If you can confirm.

I would really appreciate.

 **Pedro Cartaxo Cintra** 3:17

We can see it clearly today. Thank you.

 **Ingrassia Pier Luigi (DOCENTE)** 3:18

OK, OK. So.

So thank you very much for I mean for joining us in.

This this meeting, so the aim of this meeting, this regular meeting, is mainly to strength our communication between I mean Haas, the society and you, our partners in order to enable continuous updating and at the same time together.

Your valuable input.

Just for the just to let you know that the meeting is going to be recorded and so the the video will be available afterwards for those who were unable to join and we will save some time at the end of the meeting to, you know, post question or gather your as I said input or comment.

I really would like to welcome both established partners, as some of you who may only be meeting us for the first time, and so that's a real pleasure for us to to have you here.

So we.

I.

By the way, I would like to introduce myself.

I'm Pierre Brig. I'm currently serving as the current president and I'm very happy that Francis Pedro, our Trees Treasurer, has join us in this meeting. But and unfortunately, I have to, I mean, take the apologies for the from the other EC members who cannot join us.

Today.

So please forgive. Forgive them for this.

So in general, I would say that this is a mission envision.

Hasn't changed, remains the same as an executive committee. As a team, we continues to focus on our five main pillars, which are, yeah.

SESAM Secretariat - Worldspan 5:43

Dear Luigi, I'm very sorry to interrupt, but your screen is you. Your screen has not changed, so we're not seeing any change in the presentation.

Ingrassia Pier Luigi (DOCENTE) 5:46

Yes, please.

Any changes?

Oh my God. So you're not seeing my screen changes changing right now?

Right. No. OK, let me try to share again the screen. Sorry for that. I don't know what's happening.

OK, let me see whether.

Is it working better now?

SESAM Secretariat - Worldspan 6:29

Yes, that's it now, yes.

Ingrassia Pier Luigi (DOCENTE) 6:31

Now it's working OK. OK. So sorry for these inconvenient. So just to remind you who we are, I took the apology. I provide the apologies for our Members as I said and.

Pedro Cartaxo Cintra 6:32

It's perfect.

Ingrassia Pier Luigi (DOCENTE) 6:49

I I reinforced the concept of we are, I mean following our mission, which is to

strengthen sustainability and larger community, increase the knowledge facilitate the access.

And increase the quality and work on policy about, you know, simulation adoption as a patient safety tool.

So one year from from the launch of the global consensus statement, our community has embraced its funding and we are making advances together as a team, as a leadership, as a leaders, we have been taken taking decisions.

Making.

Improvements to our annual meeting introducing pre conference activities, improving the offer of for industry to collaborate and to engage with delegate, also adapting the format of SIMUMI and providing additional networking opportunity. In addition to annual meeting and to again respond to the request of our Community itself.

We have offered additional opportunity across the year, including the successful virtual meeting, the SAVE 2025, which focuses on innovation simulation from low and middle income countries.

The system community is growing. Our membership is almost tripled since 2022. The trend it's still increasing. We believe it's important for industry. I mean to have your voice.

Within our community, and so we will be launching a corporate membership, but the detail will be.

Shared in a while.

The community grows and this also is reflected in increase increase of interest in our annual meeting and our conference.

Based on 600 abstract submission that we collected in October and November and the current registration numbers, we are now expecting in excess of 5000 attendees for the next meeting in in balance. So we are.

Very, very happy about.

All the community is welcoming us.

As you can see from the slide, also season is actively engaging with the simulation communities not only across Europe, mainly Europe, of course, but not only in Europe but globally. Our presence here in key international.

Events reflects our strong commitment to supporting and collaborating with the national Scientific communities. So we are working hard, working hard to foster connection, to share best practises.

To ensure the sets and continue to be a leading force in advancing healthcare simulation.

And Europe, wise, but also worldwide.

We continue to work hard to on ensuring that the sustainability of our society.

Updating continuously our below to expand the.

Executive Committee because we.

Need more horsepower? We need more people working with us.

So we are delighted that Christina Diaz Navarro has been.

Elected and opposed as a president-elect as well as Pedro.

Will continue as a treasurer with no opponent in the election, so election are still ongoing for three members at large and hold. This decision will be ratified at our annual general meeting in Valencia on 25th of June.

According to the current bylaw, so reflecting the growing potential of csom, we recently launched the public tender for professional commerce organiser and secretariat, receiving over 30 response which reflect in our opinion the the interest that you know professional companies are you know.

Have to to us as a growing.

Society.

To improve our offer to Members and to the Community, we are now investing, we decide to invest in a new association management platform which will completely transform how we communicate with our Members and will give us the resource to engage.

With also with you throughout the year. So finally in response of the request to be more involved with with the society.

We will be introducing corporate membership, which we put to members for approval at our annual AGM.

General General Assembly next month.

This initiative we are designed to expand our allies initiative of course are designed to expand our activities in addiction to the increasing successful over meeting.

Which our treasurer, Pedro.

I will now talk to so I am happy to hand over to Pedro.

Police, Pedro.

Pedro Cartaxo Cintra 12:52

Thank you so much. Pierre. Richie, I think something that you said, it's very

important. We believe that can represent also all the industry that works in the field of clinical simulation. And Suzanne can be one of the institutions and organisations that can support industry as well to be represented in this field. So I think the next step that the society is trying to take is to be more comprehensive about the.

Population that we represent that I think industry has.

This very important impact to our Community and they should have this, this place as well. So I think it would be it'll be very important. So as you can see this is some of the inputs and insights that we had from our events through the year. We can see that the annual meeting is one of our major.

Events that we have and the interest is increasing year by year and we are trying. You develop and get a more representative way of our community and as we can see the numbers explained explained that we have a range of variety of professionals that nowadays they choose cesam as an annual meeting to attend and also the industry partners as well. We've just recognised that.

Ingrassia Pier Luigi (DOCENTE) 13:58

None.

Not you.

Pedro Cartaxo Cintra 14:19

Year by year we have the possibility to obtain more proposals from different.

Companies that are interested to collaborate with Suzanne not only for the annual meeting for other projects and along the year and one of our commitments is to be to have the capability to include all of them in, in our projects and it's actually one of the things that we are promoting for the future years is to have a bigger space, to improve the capability of to accommodate all of this company. So we are.

We're looking forward to have a straight relationship, not only with the corporate membership, but also to have the possibility to understand what is the industry needs and how can we as a society also support in this in this process. So we are expecting that 2025 will be also excess. We can see the numbers now.

Growing, we still have one month more than a month to end our registration process.

And we expect to meet the expectations that we had from previous years and I'm sure that the scientific programme will help a lot and we are keep the we will keep

this work in a level that we can maintain the expectations and also meet everyone's needs in the simulation community.

 **Ingrassia Pier Luigi (DOCENTE)** 15:48
Why?

 **Pedro Cartaxo Cintra** 15:48
Which I'm not sure if you would like to add something.

 **Ingrassia Pier Luigi (DOCENTE)** 15:55
Fast.

 **Pedro Cartaxo Cintra** 15:55
OK, so in the we we as we are still working in the 2025 annual meeting.
We are now reaching all of our partners to continue to explain all the opportunities that industry have at the moment available to support not only Suzanne, but also to check if they are interested to expand their contact with potential clients, but also to share.
The.
Innovative and also the new products that each industry partner might have. So in this way that we believe that we need to give the support of innovative ideas and we need to collaborate in a way that Shazam can be also the meeting point of bringing together different professionals with different objectives. One of the events and projects that we are launching this year is says men.
I will explain a little bit better in the next slides. We are preparing an official opening of exhibition because we believe that this is quite important to establish this process of opening our exhibition area to do a network reception during this period of time have the possibility to strength the contact between the industry and the delegates. So this is one of the new strategies that we are implementing.
Here we had also the opportunity to see that last year the even app went really well. The experience and the opportunity that our Members had to access to this app made a lot easier the way they they could schedule and also view the programme and all the opportunities to engage not only with Members but with industry as well. So this is one of the.
One of the the opportunities that we are launching again this year to collaborate

with the with our even app, we could see that last year the numbers of contacts. That's the members had with the app with not only the push notifications, but all the services that the app could provide was really high. So we believe that this is a good investment to help our our delegates to be more active and also to establish this networking process between them during the annual meeting. We're still continue to have.

Promoted industry workshops. That's one of the points that we believe it's important that we need to include also the opportunity.

For our industry to have their own workshops to be able not only to showcase the products they have, but probably to also connect with the with the members and delegates, to make them realise the impact that this product might have in the educational fields we open this year as well, the opportunity of sponsored keynotes and hot topics, we still have some.

Space availables and we believe that this is a very important, very important and. Good opportunity to promote the your brand and and your vision and mission as a company through the educational field.

We also are now booking our one to one EC meetings with our platinum partners. So we are receiving or you already received.

This invitations to have the meeting with our EC members, that is something that we always like to offer to our platinum partners because it's it's a very important space to share some concerns, to share some opportunities.

And also the point of view of industry about the events and also to connect with them. And I think the feedback that we can receive from industry, it's very important because it's something that we can also learn and improve what we are developing to, to our Community season priority is something that we are recovering from previous years. So it's it's been I think since COVID that we are not celebrating.

This event so we are coming back with this party and I think that is a great opportunity as well to have a more relaxed contact with the with, with our delegates and also a good opportunity for industry to engage not only with people that are a reference in the simulation field, but also Members that would like to be.

With with together with this.

With this, Members and also to have the opportunity of engaging.

The the the industry with with this community, of course it's a smaller event. So it's it's a great opportunity to have a direct contact with with both delegates members

and also the keynote speakers and hot topic speakers. So we believe it could be a good opportunity for you to consider some of the opportunities we have for.

 **Ingrassia Pier Luigi (DOCENTE)** 21:12
OK.

 **Pedro Cartaxo Cintra** 21:13
This season, party and something that we would like to share with you and then probably I will pass this last topic to Pierre Weiji to talk about the key stakeholders because because I think it's something very interesting and important that we are doing this year.
Valencia.

 **Ingrassia Pier Luigi (DOCENTE)** 21:34
So thank you. Thank you very much, Pedro. So we are very honoured that representative from W show from the W show headquarters in WTO patient safety chapter are come to.
And to attend our meeting as well as we conducted successfully.
Spanish colleagues of.
Medicine and nursing and they will will join all or all or part of the conference. And in Valencia highlighting I mean the profile of sesam I think important to.
Highlight that to also one of the our main speaker.
Comes from the European Patient Safety Foundation.
Again to.
Emphasise the strategic activity that see some is undertaking to connect simulation with the patient safe patient safety and those stakeholders who are fully involved in promoting.
Patient safety, just to make them aware and fully capable to.
Incorporate.
The simulation is one of these.
Tremendous tool.
Petrol. I don't know whether you want now to describe a little bit more in details system in.

 **Pedro Cartaxo Cintra** 23:12

Definitely. So this is one of the other projects that we are launching and we are trying to see the acceptance and the impact that we might have and probably also a good opportunity for our Members to engage. We believe that sometimes our Members and delegates, they have so many ideas, some of them are really innovative and sometimes we are just focused on research or either the prototype, but.

What we do in the educational field?

All the projects that we are developing in our universities and institutions, I think that we are doing so many relevant things that sometimes if.

This is not published in an article. Sometimes we do not know nothing about that, and sometimes this content isn't isn't is not right to be published because it's not a content to be present in in a scientific journal. So I think that's considering clinical simulation and considering the.

Innovative ideas that we are perceiving now in our in our Community, I think Suzanne needs also to give the opportunity for our delegates to expose this ideas, get get, get, get some feedback from colleagues.

To about what they're doing and what they're producing and what's the future of this innovative ideas. So this is the beginning of the idea of Cezanne. We want to give the opportunity to our Members to have this nest where they can start growing their ideas.

That's where they can share their ideas and receive some feedback about what they're doing and what they can potential do or probably collaborate with others.

The the projects that they are developing. So we have this vision of that. Them can also be a place where we can incubate this novel ideas and we can facilitate the process of connecting with with others. So we would like to give this.

Environment where we are not only talking with.

Experts, we are not undertaking with research as experts, we can also give the opportunity to have a wider perspective of participants in in this nest, including the industry, including other societies, for example, that can support us on prototype.

And and also the patent process having this like wider idea about what is innovation, because we are talking so much about what is being innovative and what is innovation but.

How can we actually materialise this? This process of being innovative, so this is the the beginning of the process. We will start with a small steps and then we will we will, we would like to see the acceptance of our delegates about this this idea, but we will start with two strategies. One is during the pre conference we will have a full day

dedicated to.

This innovative innovation Nest what we would like to give to give to our.

Delegates is the opportunity to be present during the morning and have the possibility to to assist to, to, to some not workshops. But I would, I would say, more like speech of experts about what is innovation, what what is innovation outside of the simulation field, how can we translate and transport this innovation in innovation, perspective, innovative respect, perspective to the.

Simulation failed. How can we protect our ideas? How can we boost our ideas? How can we share and probably have the potential to develop?

Together, some of our ideas that we have in the simulation field, so apart from this, I think it's a great opportunity as we have this wide perspective and different colleagues that have experience in different fields to also showcase their innovative ideas.

So that's why we opened the Sezaman showcase process where any delegate can present their idea they can send to cesam elevator pitch video from 2:00 to 3:00 minutes, where they can they can showcase their idea. After this process, we will select the eight most.

Relevant ideas that were submitted and then during the pre conference afternoon. They will have the possibility to showcase this ideas to some experts from industry, from education field, from the research field and from the clinical assimilation field as well in in in the Broadway. So what they it's it's going to be something like a Dragon's den, a Shark Tank perspective where they will have the capability to train the speech.

The way they can engage the way they can in in a few minutes.

Just show a proposal, present their idea, and catch everyone's attention about what's what, what they developing and how can they and receive. Also the feedback from this group of and panel of experts about what they developing and how can they probably improve this this idea. So for why I'm am I talking about at this point with with you? Because I think it's very important to have.

Industry in this panel.

Of people that can evaluate the ideas that we would be presented. So we are more than welcome to receive.

Your availability to participate in session and showcase and I am more than welcome to show you this, this opportunity and how can you collaborate in this in this process. According to this process of Sessumin showcase, we will also launch a new awards

that will be related for the three.

That showcases they will have an award that will be supported by Mr Lou Obaddorf and we will have the Lou Opendorf award. That's three of them. We will have the possibility to gain this grant of 2800 euros to support them, to launch and skip developing their ideas through the year and then we will want to engage with this. Three groups where they can have the possibility in the next.

One or two years to show us that the results of the projects that they are developing, so this is the general idea of what is 1009. We are starting as a small ag in this in this incubator in this net. We hope that we can grow this idea in the future years. But I think it's something that is new in our field and I think it's quite important because all of us we have so many ideas that sometimes we are stuck because we don't know. What's the right path to follow and to keep developing this this project?

IL Ingrassia Pier Luigi (DOCENTE) 30:38

Thank you, Pedro, for the enthusiasm that you have invested, keeping investing in making this a reality and also in the way you presented it, it's I think I would like to underline once again that this is one of the actions that we are taking to as we, as I say that at the beginning to expand our our Community embracing not only the use the regular user of simulation, but those who are.

Beyond.

The these regular user. So either technicians, inventors who have, whoever has a good idea to showcase and share with the community. So we as a system want to be this type of platform.

So in summary about the coming event, we are very excited about our annual meeting in Valencia and look forward for to seeing many of you there.

Whilst we are preparing for the annual meeting next month, of course we are also delighted to announce, announce the destination of next year annual meeting, so we are trying to work as much, let's say faster as possible in order to anticipate.

The announcement, so with the theme of celebrating the diverse community of healthcare simulation, the 31st annual meeting.

Sam would be held next year in Indiana. I would like to create a sort of suspense, so we would like to go. We are going to Leon. So we are very excited to announce that next 2026 annual meeting will be held in.

In Lyon, why Leon? For different reasons.

So Leon.

So they are pioneer in public health and scientific research.

Sector Leon is one of the leading centre in life science, both in France and also worldwide.

In addition, and is, I think it's very important to emphasise recently who open and its, you know, official training Academy. So Leon is home to.

With the International Agency of Research on Cancer is a worldwide #1 producer of vaccine, so it's the second city in France for research.

That boosting more than 500 public and private research laboratories and over the and over 13,000 researchers. So it's a it's a real.

Poll of scientific community in healthcare.

And so for us, it's in very strategic to have our annual meeting there, especially also for the connection that we are creating with the W show. As I mentioned at the beginning. So we have established a great relationship with the the French community, the French scientific community, SOFASIM and the local institution and simulation centres in advance this year.

Of next year meeting, which promised to offer wealth of opportunities. So we are very, very excited.

About what we are expecting to have so and now I think we gave you the overview in brief of what we have done currently many things are still under of course undertaking, but we also would like very keen to happy to open the floor to comment in question so.

All attendees are currently on mute.

We can either share comments on the chat or ICU hands to ask a question. So we are very happy to listen to you and collecting your input, your comments, your your ideas. If there are there any.

Pedro Cartaxo Cintra 35:15

We have one hands up, yeah.

Gilat Noiman 35:18

It's me. May I ask you? So thank you very much for the presentation and for the meeting and for all your efforts to promote simulation.

Pedro Cartaxo Cintra 35:18

Yeah, perfect. Yeah.

GN Gilat Noiman 35:28

Through sesame, so a question in this upcoming session, what is the status of surgical simulation? It's something that we've been we've been discussing for many years now. And how is it going to be in this system is there?
A track for surgical simulation? Or how do you did you compile it for this year?

IL Ingrassia Pier Luigi (DOCENTE) 35:54

So thank you very much Gillette for your question. I know we've been talking very often about this this topic, so the action I think are multiple. So some you already mentioned it you we increased the number of trucks there are dedicated to either a surgical field or the use of.

Simulator. As with the therapeutic purpose as well, especially for surgical rehabilitation. For example, this type of things.

One of the Keyn speaker, we will talk about a very important and I mean, I spoiler it now, but please keep it between us.

So we we will be talking about a surgical and nationwide.

Project in in Orelan about surgical simulation, so it's also one of the you know very well the formats. So the plenary and the keynotes are few, but we are dedicating. Entirely one of it to to surgical simulation.

We also increase the number of scientific Committee members.

Associate members, so those who are, you know, collecting and revising the.

Haves Strat and worship proposal that we received from the surgical from the surgical side.

So in order to make our.

Voice more. I mean better well known, better known in the.

In the surgical field and also to incorporate different inputs and having you know different minds in, in our scientific community extended group.

And I I probably have to say that also we collected, you know, good feedback also from from, from the community.

You know the number of.

Surgical.

Society Web society companies are who has kid who contacted us for, you know, information asking for be part of our communities has increased in the in the last month.

GN Gilat Noiman 38:28

Thank you.

 **Pedro Cartaxo Cintra** 38:30

And I if I may add as well, if you if you have a look through the programme on Wednesday during the afternoon, one of our lectures and keynotes that we have is about simulation, training for robotic surgery, that will be our speaker, Aarti Sharma, who will be will be explaining this important.

Part of the clinical simulation that sometimes, as you said, is not well known. So I think it will be a good keynote that can do a little bit of reflection about the impact of robotic surgery and that I think it could be could be an important step for bringing this topic to our community.

IL Ingrassia Pier Luigi (DOCENTE) 39:11

Thank you very much Pedro for this for adding this.

Yes, Phillip, please.

PP Philip Purver 39:22

Yeah, I mean, not so much a question, just saying listening, it's a great direction of travel and you don't have all the answers today obviously.

But I think that broad approach in getting industry involved, it is just great and I just really give that feedback for you really and hope that we can contribute in any small way because we're not a big company.

Because it's good for the whole industry, it's good for patient safety.

It's good for everybody. So just no, I think it's very good. Thank you.

IL Ingrassia Pier Luigi (DOCENTE) 40:00

Thank you very much Phil for your comment. I would like to, let's say, underline what you say. So we strongly believe that the. So we strongly believe in synergy.

So we don't see, honestly, let's say any conflict of interest between you and us, we have a different missions, of course, and transparently it's it's clear if we are able to find, you know.

Commonalities and common project.

Budget because as you said, we both are aiming to increase the use of simulation for

patient safety. I think this is our main common mission with different result for you also it's business for us is it's also business you know in from in some way so.

 **Philip Purver** 40:45
Yeah.

 **Ingrassia Pier Luigi (DOCENTE)** 40:53
We don't see any conflict. What we would like to promote is the is the partnership in. In this.
Well, if there are no, yes, yes, you please, John.

 **Gilat Noiman** 41:17
Stop. I want very practical comment. So you know this, this exhibit hall in Valencia. I've been there last year in another event and there is a there. It's a great building, but there's a very big problem of the sun coming through the glass hole on the right of it. So I think it can, it might make sense for sesame to think about it in advance because they don't provide any solution to it.
And really, all the both that were happening that were on that glass wall, it was just blinding people couldn't see.
Everything. So if there is anything to do, I think it is worth thinking about it.

 **Pedro Cartaxo Cintra** 41:59
It's a very good input. May I just ask you, do you remember the month that we have been there and you had this issue the month of the year?

 **Gilat Noiman** 42:09
It was June, July or something like that.

 **Pedro Cartaxo Cintra** 42:13
I'm thinking about, you know, the movement of sun and to see if it could be the same problem. So definitely this is something that we will report and and ask the the venue. Thank you so much for sharing this because I think it's very important. Thank you.

Gilat Noiman 42:26

Thank you.

Ingrassia Pier Luigi (DOCENTE) 42:34

So thank you very much. I think we can end the meeting. We are in time. So I on behalf of the the World Executive Committee, the World Extended Committee and on our community, we really thank you for your time for I mean for supporting us. We as I said strongly believe in this partnership. We are making some.

Big changes, even in our bailout to make your voice more.

You know, listen, listen to. And so I think it's time to meet him presence in in Valencia so.

Alright, so thanks and enjoy the rest of the day. Thank you.

Gilat Noiman 43:25

Thank you. Bye.

Pedro Cartaxo Cintra 43:25

You so much have a nice day. Thank you. Bye.

SESAM Secretariat - Worldspan stopped transcription
